

DNYANESHWAR SIRAME

Aspiring Data Analyst | SQL | Python | Power BI | Excel

[dnyaneshwarsirame4991@gmail.com] | [+91-9187453239] | Pune, Maharashtra, India | [www.linkedin.com/in/dnyaneshwarsirame]

SUMMARY

Application Support Engineer with 3+ years of experience in the Banking (BFSI) domain, including SQL-based transaction validation, production issue diagnosis, and log analysis. Recently upskilled in Data Analytics (SQL, Python, Pandas, NumPy, Power BI, Advanced Excel) and built hands-on projects turning raw data into actionable insight. Seeking to transition into a Data Analyst role, combining domain knowledge of financial/transactional systems with strong analytical and visualization skills.

SKILLS

Languages & Tools: SQL, Python (Pandas, NumPy), Excel (Advanced), Power BI

Visualization & Reporting: Power BI dashboards, DAX, Excel Pivot Tables/Charts, Matplotlib

Domain Knowledge: BFSI transaction systems, SQL data validation, production/application support, root-cause analysis

PROJECTS

Hotel Booking Analysis

Personal Project

Python (Pandas, NumPy, Matplotlib)

- Analyzed 119,000+ hotel booking records to uncover cancellation patterns; found an overall cancellation rate of 37%, with City Hotels cancelling at a higher rate (41.7%) than Resort Hotels (27.8%).
- Identified a strong relationship between lead time and cancellation risk — bookings made 180+ days in advance cancelled 57% of the time vs. 9.6% for bookings made within a week of arrival.
- Flagged a data-quality anomaly where non-refundable deposit bookings showed a 99.4% cancellation rate, and investigated it as a potential test/fraud pattern rather than taking the metric at face value.
- Cleaned and preprocessed raw data (handling missing values, e.g. ~94% missing in the 'company' field) prior to analysis.
- Found repeat guests cancelled far less often (14.5%) than first-time guests (37.8%), suggesting a loyalty/retention angle to reduce cancellation-driven revenue loss.

Computer Hardware Sales Analysis Dashboard

Personal Project

Power BI, DAX

- Built an interactive Power BI dashboard analyzing 5,000+ sales orders (2020-2022, ₹9.9 crore in total sales) across products, states, brands, and supervisors.
- Created a DAX profit measure (SUMX-based) to track a 23.1% overall margin, and broke it down by category and region to surface the most profitable segments.
- Identified Monitors, CPUs, and Graphic Cards as the top 3 categories by revenue, and Maharashtra, Uttar Pradesh, and Gujarat as the top 3 states, together driving over one-third of total sales.
- Built supervisor- and brand-level breakdowns with slicers/filters for dynamic, self-service exploration by stakeholders.
- Tracked order status distribution (Processing, Order, Shipped, Delivered) to support operational visibility alongside sales performance.

EXPERIENCE

Application / Technical Support Engineer

Dec 2022 - Present

Bengaluru / Pune, India

- Provided L1/L2 technical support for BFSI (Banking, Financial Services & Insurance) applications, ensuring smooth daily operations and minimal downtime.
- Wrote and validated SQL queries to investigate transaction discrepancies and support data accuracy checks.
- Analyzed application and transaction logs to identify root causes and recurring issue patterns, reducing average ticket resolution time.
- Monitored system performance and application logs proactively to detect and address issues before escalation.
- Managed user accounts, permissions, and security compliance in line with organizational policy.

CERTIFICATIONS

- Cloud Computing + Linux Workshop — CloudDevOpsHub (Sep 2025)
- Master Top 10 AWS Services — CloudDevOpsHub (Sep 2025)
- Docker & Kubernetes Fast-Track Weekend Learning — CloudDevOpsHub (Aug 2025)

EDUCATION

B.Tech / B.E. [Your Branch, e.g. Computer Science/Electronics] — [Your College Name], [Year]
